

BMS Motorsports Fuel Line Flush Instructions

If there are any problems with the speed on the 50CC mopeds, follow these steps

Locate the fuel line leading to the carburetor

Disconnect the fuel line

Pull the fuel line until the end is clear of the engine area

Start the moped and run for about 30 to 40 seconds to let any of the remaining fuel from the factory drain out of the line.

Reconnect the fuel line and add fuel to the moped and start.
